Project Design Phase-I
Proposed Solution

Date	01 October 2022
Team ID	PNT2022TMID25383
Project Name	Project – Web Phishing Detection
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S No	Parameter	Description
1.	Problem Statement (Problem to be solved)	Web phishing tends to steal a lot of information from the user during online transaction like username, password, important documents that has been attached to that website. There are Multiple Types of attack but there is no auto detection Process through Machine Learning is achieved
2.	Idea / Solution description	ML and data mining techniques like classification algorithm user can able to attain a warning signal to notify these phishing websites which helps the user to safeguard their identities and their login credentials etc. python is the language that helps to enable these techniques.
3.	Novelty / Uniqueness	This project not only able to identify the malicious website Identified and also blocks some various mails /ads from these malicious websites
4.	Social Impact / Customer Satisfaction	This web phishing detection project attains the customer satisfaction by discarding various kinds of malicious websites to protect their privacy. This project is not only capable of using by single individual a large social community and organisation can use this web phishing detection to protect their privacy.
5.	Business Model (Revenue Model)	This developed model can be used as an enterprise application by organisations which handles sensitive information and also can be sold to government agencies to prevent the loss of potential important data
6.	Scalability of the Solution	This project's performance rate will be high and it also provide many capabilities to the user without reducing its efficiency to detect the malicious websites.
